

Testing Laboratory of Boilers

- Cooperation in development of low-capacity power generation units – boilers

- Organization of workshops for stove builders
- Testing of heavy accumulation stoves
- Calorimetric room

- Safety and performance tests of HELUZ chimney systems

- Advisory and consulting services in the field of solid fuel combustion in low-capacity units
- Educational courses for general public
- Boiler efficiency calculator

Ministerstvo životního prostředí

- Advisory and consulting services in the field of solid fuel combustion in low-capacity units
- Educational courses for general public
- National balances of emissions from heating

ALME

Asociace autorizovaných laboratoří pro měření emisí

- Proficiency testing programme in the field of emission measurement and sampling for ALME OR-06 method "Determination of pollutant mass flow in flowing air mass" implemented on dust-loaded testing train

- Cooperation in development of local solid fuel firing appliances – stoves

- Determination of thermokinetic parameters of coal on drop tube

- Cooperation in development of low-capacity power generation units – boilers

VIADRUS

- Cooperation in development of low-capacity power generation units – boilers

- Cooperation in innovation of solid fuel firing appliances – cookers
